

Supplemental Table S4. Comparison of GO across species for Set 3 and Set 4.

Set 3: Arabidopsis genes whose orthologs have been associated with the *plant embryo coleoptilar stage* (coleoptilar) of maize in the PO, but which have not been associated with the *plant embryo cotyledonary stage* (cotyledonary) in Arabidopsis. **Set 4:** Genes associated with the *plant embryo cotyledonary stage* in Arabidopsis. GO Branches: BP = *biological process*, MF = *molecular function*, and CC = *cellular component*. FDR is the False Discovery Rate of (Benjamini & Yekutieli, 2001). Any reported value is significant at P=0.05 when corrected for multiple tests. Colors correspond to FDR values, with red most significant and dark gray non-significant.

GO Information			FDR	
Term ID	Branch	Term label	Set 3 – coleoptilar not cotyledonary	Set 4 – cotyledonary
